## **Evolution and Implications**

**Mats Danielson**

$$Loss = L_{w_b^b} + \frac{\lambda}{2n} \qquad \frac{z^{-\partial+1}}{1} = (z)\delta$$

$$z^{[l]} = w^{[l]} \tilde{a}^1 + b^{[l]} \qquad \frac{u}{u} = \frac{z}{\gamma} \, Loss$$

$$\frac{z+1}{z}=\frac{g(z)}{1} \qquad \frac{\alpha}{z} = \frac{[1]}{[1]} \qquad \frac{\partial J}{\partial w_j} = \frac{\partial}{\partial} \Big|_{\frac{1}{2}} \\ L = \frac{J}{N} \sum_{i=1}^N \sum_{i=1}^N \big(y^{(\mathbf{x}^{\circ})} - \tilde{y}(x^{[l]})\big)^2$$

$$L\big(\tilde{a}^{12}\big),y\big)=-\frac{1}{m}\big(\tilde{y}^{\tau(i)}\big)\ln a\big)+\big(1-\tilde{y}^o\big)\ln\big(1-\tilde{a}^o\big)$$

$$w_j^{\tau[l]} = w_j - \alpha \nabla^z \overline{w}_j^{\tau} J(w,b) \qquad \frac{\partial^{[l]}}{\partial^{[l]}} = \frac{d^{[l]}}{d^{.l}}$$

$$(q\,\,^f\!\mathcal{M})\,f^f\!\Delta^o\,^f\!\mathcal{M}=\,_{[k]}\!e \qquad (\mathfrak{x})\,\tilde{\zeta}_{\mathfrak{x}}\nabla\cdot\nabla_y\tilde{y}(x)$$

$$\tilde{d}(i^{\mathfrak{l}}))=\frac{\partial L}{\partial z^{[c]}}\,g^{\mathcal{T}_r}(z^{[l'c]}) \qquad \nabla J\left(w,\right)=\left(x\right)\cdot\nabla(x)$$

$$\nabla \bar{J}(w,b) = 2 \left( y(x) - \tilde{y}(x) \right) \cdot \nabla_y \tilde{y}(x)$$

**First printing, March 2023**

*And then one day you find  
Ten years have got behind you  
No one told you when to run  
You missed the starting gun  
You run and you run  
To catch up with the sun  
But it's sinking  
Racing around  
To come up behind you again  
The sun is the same  
In a relative way  
But you're older  
Shorter of breath  
And one day closer to death*

– Roger Waters

## About the Author

**Mats Danielson** is a Full Professor of Computer and Systems Sciences at Stockholm University. He also holds a UNESCO Chair Professorship in Higher Education within Computer Science and is a Senior Research Scholar at IIASA, the International Institute for Applied Systems Analysis in Vienna. He has previously served as Vice President of External Relations, Innovation and Information Technology and as Dean of the Faculty of Social Sciences at Stockholm University.

He holds a PhD in Computer and Systems Sciences from KTH Royal Institute of Technology as well as dual degrees in Computer Science and Engineering from KTH and in Economics and Business Administration from the Stockholm University School of Business. Before entering academia, he worked for more than 20 years as an IT and management consultant.

**Machine Intelligence – Evolution and Implications** deals with the evolution of computer systems that in some sense seem to display intelligence that resembles that of humans. Such systems are developments within the broader area of artificial intelligence. The history goes back to the 1950s while dreams of thinking machines originate from much further back. The second part of the book discusses possible implications from the rapid advances of machine intelligence in terms of both opportunities and threats.
